## Canadian Utilities Names Executives

At the annual meeting of the Canadian Utilities Limited in Calgary on April 28, various changes in the personnel of the executive offices were made effective.

The position of Chairman of the Board was abolished and a new office of Chairman of the Companies was created. Mr. E.W. Bowness, who has been Chairman of the Board for some years, retires from that position, but continues as a member of the Board of Directors. Mr. H.R. Milner, who has been President of the Company for 17 years has been appointed to the new office of Chairman. He is succeeded as president by Mr. B.M. Hill, who has been Vice-President and General Manager for some years past. Mr. J.G. MacGregor has been appointed General Manager, taking charge of the detailed operation of the Company. Mr. F.A. Smith continues as Controller. Mr. D.K. Yorath has resigned his resignation as Secretary of the Company to accept an appointment as General Manager of Northwestern Utilities Limited. Mr. T.A. Montgomery has resigned as Treasurer and succeeds Mr. Yorath as Secretary. Mr. A.M. Irvine becomes Treasurer.

The number of directors was increased from nine to eleven and the following added to the Board: Dr. W. Foxon, Drumheller. Dr. G.L. Cooke, Lloydminster. Mr. J.E. Thomson, Grande Prairie.

## Edwin Johnson Buried at Carbon

Funeral services for Edwin Johnson, who died from injuries received in a truck accident on April 22, were held at 2:30 p.m. Wednesday, April 27, from Carbon United Church, with Rev. C.A. Warren officiating. Pallbearers were Donald Martin, Tommy Dixon, Sam Goudie, Gordon McCracken, Clarence Guynn and Lloyd Anderson. Burial was made in the Carbon cemetery with Three Hills Funeral Home in charge of arrangements.

Surviving are his parents, Mr. and Mrs. Pete Johnson, and two brothers, Lyle and Glenn.

While painting the roof of his house last Tuesday, Morris Switzer had the misfortune to fall and sustain a double fracture of his leg. He was taken to the General Hospital and at last report is doing well.

## LONG YEARS AGO

May 2, 1929

A stubble fire on the Fred Sailer farm got out of control on Thursday when fanned by a sudden wind and swept to the Robert Little place, where the flames destroyed a granary containing 600 bushels of oats. The Carbon Junior baseball team lost to Three Hills on Friday by a score of 17-9. Carbon players were: Leo Trepanier, G. Ramsay, E. Morritt, J. Spence, B. Ramsay, J. Lynn, N. McClure, B. Edwards and E. Wells.

Work has commenced on the new billiard hall and barber shop between the Farmers' Exchange and the Carbon Hotel. Percy Edwards, proprietor of the hotel, is having the building erected and the barber shop will be operated by the local barber, L.G. McQuade. George Batsch has installed a gasoline pump in front of his blacksmith shop. This makes the tenth pump for Carbon.

## Carbon Athletics Lose 1, Tie 2

The Carbon Athletics played three ball games in the past week and finished the week's activities with two ties and one loss.

On Wednesday, April 27 the Athletics travelled to Nacmine to play the Drumheller valley champs and after seven innings of tight baseball the game was called because of darkness with the score at 3-3.

Sunday, May 1, saw a good crowd turn out at the local diamond to see the return match between these two teams. Carbon suffered its first defeat of the season, going down 6-2 before the Nacmine club. In this game the Athletics displayed their newly-purchased uniforms for the first time.

Sunday evening, May 1 the Carbon team was host to the Grand Forks nine and after seven innings of wide-open baseball the game was called because of darkness with the score knotted at 7-7.

In five games played this season Carbon has emerged victorious on two occasions, lost one and tied the other two. The next home engagement will be a doubleheader with Trochu on Sunday, May 8, the first game at 2 p.m. and the second at 5 p.m., weather permitting.

A modern jet plane is made up of more than half a million pieces.

## HI-SCHOOL HI-LITES

There has been considerable activity in the school grounds during the past two weeks—everyone is loosening up their stiff muscles and joints preparing for a track meet being held at Swell on May 23. The Students' Union have purchased two cups which will be put up for competition at the meet and these will go to the individual boy and girl making the most points.

The girls' softball team have been practising diligently and should be ready for action in the near future.

If every one who drives a car would lie a month in bed, With broken bones and stitched-up wounds, or fractures of the head, And there endure the agonies that many people do, They'd never reach safety any more to me or you.

# Royal Family Fan Mail Heaviest In World--Often Brings Results

LONDON—Six times a day a large red mail van drives up to the side entrance of Buckingham Palace to deposit parcels, packages and bulk mail bags.

It is estimated that the King alone has received 3,000,000 letters in the course of his reign. Nearly as many have been addressed to the Queen and Princess Elizabeth.

Today's fan mail addressed to the Royal Family is the heaviest in the world—and it often produces results.

For instance: Young Mr. and Mrs. Ernest Frampton sat at the bedside of their sick baby in a cold and draughty Nissen hut at Weymouth and wrote to Princess Elizabeth.

Obviously, the letter was just to thank her for a food parcel sent to them for a few days.

Princess Elizabeth, born on the same day as Prince Charles (Novem-

ber 14). They did not know exactly how the Princess' staff knew of the coincidence, but receipt of the parcel made them feel they had a friend at court.

They wrote of draughts, of a leaky ceiling, of the fact they'd found in Elizabeth's cot . . . and before long the Weymouth housing authority received a letter from Buckingham Palace.

It was tactful, even formal in tone, but there was no mistaking its meaning. The Framptons were quickly moved to a better and warmer hut, and on the council's waiting list for houses their name now is underlined with red ink.

Mrs. Betty Mausey, an English war bride, wrote to Princess Elizabeth from Kansas City explaining that for months she had been trying to get back to England to see her father, who was seriously ill.

She soon heard from Buckingham Palace that inquiries were being made and soon after the British consul in Kansas City began to smooth away obstacles barring her return.

A man living at Clapham Common, Southwest London, wrote to the Queen telling of the great courage under suffering of a woman who had lain on her face for 12 months with severe burns. This letter passed all secretarial barriers. The Queen answered the letter personally. Then she went to see the woman in hospital.

One of the miracles of Buckingham Palace is that every one of the avalanche of letters received—accepting anonymous letters—is acknowledged. On significant occasions the letter of Prince Charles the flood rises as high as 10,000. Every letter is entered in a register.

The principles of the British postmaster Edward Butts books less than 400.

The Royal Family obviously cannot read all the letters addressed to them, but salient points have a way of percolating through the maze.

## Brighter Colors In Ties Is Fashion

Timid ties are out this year. The fashion state is set for brighter, bolder, gayer neckwear. Now that the male has decided he wants the conservative look in suits and coats, he has only one chance to brighten himself up—and he is taking it. The more subdued the suit, the gayer the tie, says Fashion, and indications are that the young Canadian man likes this idea and likes it in sleek wool neckwear.

Bright ties are being snatched off display racks in record numbers while their quiet counterparts left behind. Pale-toned stripes and solids are giving way to such artistry as epaulettes, stripes, panel-length feathers, palm trees, hunting dogs, flying geese, wavy lines mingled with diagonal stripes, and, of course, with strong rich colors and all marketable patterns of interest. Executed with high good taste, these designs sometimes use as many as a dozen different colors in one tie panel.

A word from the experts to guide you in choosing your new tie.

A gray suit—almost any color tie. A brown suit—ties with a combination of brown and gray, or brown and blue.

A blue suit—ties in a combination of yellow and blue or yellow and maroon.

Short, stout men should wear ties with vertical designs; small men should avoid "fussy" ties with checkered motifs.

With striped suits, any man should stick to small figures, solid stripes; with plaid suits, checks, small figures or bold stripes are a good choice; light striped ties go excellently with tweeds.

WOMEN'S HANDS AND FEET ARE GETTING LARGER

That is the opinion among New York manufacturers of gloves and shoes. They blame the change on war work, athletics, open-toed shoes, flats and sandals.

"Some of our famous beauties wear up to a size 10," said a shoe manufacturer.

A shoe store manager in New York said that in 1940 90 per cent of shoes sold ranged from sizes 4 to 9. Today the range is from 5 to 9. A glove-maker said there has been a 20 per cent drop in the demand for gloves and a corresponding increase in the demand for size 7 and up.

By E. V. Durling

On The Side

Are you 40 or over, Mister? How are you feeling? Anyway, don't get to thinking of yourself as a middle-aged fellow. Have you given a thought to the fact that the great majority of the leading male film stars are over 40? Bing Crosby is 44, Humphrey Bogart, 48; Gary Cooper and Clark Gable are both 47. While I can't go along with the man who said: "Life begins at 40," I am in accord with the one who observed: "Age is a state of mind." So think as young as you can. Also try, like the Hollywoodians aforementioned, to look as young as you can. Don't let your wife be the only one in the family who looks 15 years younger. If you do, she may start calling you "Pop" instead of "Dad".

By E. V. Durling

On The Side

Why are you so strongly prejudiced in favor of brunettes?" asks a Seattle subscriber. "I've known so many blondes who have turned to their hair dark." I don't ever hear of a blonde who wanted to be a brunette? I don't know. Several natural blondes who have switched to being brunettes. Joan Bennett is one.

FOR BRIDES ONLY

The great majority of brides still feature a triumphant expression when emerging from the church with the ring finger on their hand. It is an expression which seems to say: "Well, I got my man." Of course, it is only fair to state that these days a girl is considered to feel somewhat triumphant when she gets one into matrimonial harness. But this feeling should be concealed. It is not only men by those present at the wedding but by thousands of others who view the photographs of the ceremony in book form. That newspaper that takes the average bride to task for courages bachelors. It sends a slight shudder through the frames of single men who love their bachelors. All brides should be reminded liberally to assume an expression of sweet innocence on emerging from the church. She should cling lovingly to the bridegroom's arm. When the photographs are taken, the bride should not stare into the camera but should look up at her newly-acquired husband with an expression of intense adoration. In fact, the bride should strive to create the impression that she is the captured one, not the bridegroom.

RECORD MOUTSHACE

Am asked how long a moustache would be if a man let it go untrimmed for 20 years. Couldn't say. All I know is that the record for a long moustache is 48 inches in length. The possessor of this unusual moustache was a native of India named Arif Devar Arlan. Don't know how long it took him to grow it. It is not known whether he really shaved it or not. The Women Department to determine the extent of the approval or disapproval of women as to being kissed by a man with moustache reveals the majority of females do not view this type of occupation with enthusiasm. They are also almost unanimously agreed that being kissed by a man with beard is not a desirable experience. This brings to mind a recent Clark Gable remark when he refused to pass a calling for the wearing of a beard. Said Mr. Gable: "Beards are not romantic".

## Suits Head List Of Fashions

WASHINGTON—Weather predictions for 12 months in advance are possible for any city, Dr. Charles G. Abbot, an expert of the Smithsonian Institution, reported. He bases the system on periodic fluctuations in the heat radiation of the sun.

Dr. Abbot disclosed a near-perfect record for predicting cold and warm days—by actual dates—in the United States capital during 1944, and said the method could be applied to any other local area in the world.

Dr. Abbot's report concerns temperature variations only. But he also has worked out a similar solar method of forecasting the likelihood of rain or dry weather on specific dates a year ahead of time.

Here's his method:

For years, he has studied weather records for the capital. He says he has found that drops and increases in temperature, when seen to follow no predictable pattern, actually are coincident with periodic fluctuations in the radiation given off by the sun.

He says there is a "uniform periodicity" of a little more than six days in the sun's heat radiation—this, he says, and falls in intensity due to sunspots and other solar phenomena as the great body rotates on its own axis.

This pattern of periodicity can be applied to the weather of any city, says Dr. Abbot, so that forecasts can be worked out for them—both on a temperature and rainfall basis.

## Have Fever Drug Available Soon

DETROIT—A new drug for hay fever, asthma and other allergies is 20 times more potent than present ones, two scientists said.

The new drug, which is far smaller doses, and it protects against an allergic attack three times longer than other drugs, they report.

Dr. Abbot disclosed a near-perfect record for predicting cold and warm days—by actual dates—in the United States capital during 1944, and said the method could be applied to any other local area in the world.

Dr. Abbot's report concerns temperature variations only. But he also has worked out a similar solar method of forecasting the likelihood of rain or dry weather on specific dates a year ahead of time.

# World News In Pictures

**ROYAL SISTERS ATTEND EGYPTIAN FAIR** — Fair Fawzia and Faiza, sisters of King Farouk, are seen at Egypt's miniature world's fair, 200 acres of exhibits. Princess Fawzia, considered one of the world's most beautiful women, was divorced by the shah of Iran, and recently remarried.

**CHIEF SCOUT**—The Lord Rowallan, M.C., T.D., chief scout of the British Commonwealth and Empire, is pictured on his return to London, England, after his Pacific tour which commenced on Dec. 17, 1948. Highlight of the tour was the Pan-Pacific jamboree held at Wagon Park, Melbourne, early in January, which was attended by more than 10,000 Scouts. The gathering was made up of contingents from all the Australian states, New Zealand, Malay, Fiji, Hong Kong and Tahiti as well as from South Africa, Canada, India and Pakistan.—S.N.S. photo.

**HEBREW PASSOVER CELEBRATED**—A few lifetimes separate identical twins Stanley and Paul Cohen, eight, from their elderly counterparts, Herman and Solomon Brof, 84, but binding them is the ancient tradition of the Hebrew faith, as the nonagenarian pair explain to their bright-eyed successors the significance of the Hebrew Passover, in the Brooklyn Hebrew Home and Hospital for the Aged in Brooklyn, N.Y.—S.N.S. photo.

**SEARCH FOR MACHINE-GUN BULLETS**—Police in Hamilton, Ont., are still searching for 23 machine-gun bullets after two boys narrowly escaped death when one of the bullets exploded. The bullets, according to the boys, were found in a recently vacated house. John Termini, nine, still has his eyes bandaged. They were filled with dirt when the bullet being pounded into the earth exploded. John Ryder, seven, a playmate, leaning over the bullet as he drove it nose-first, into the ground, escaped with a face blackened and slightly burned from cordite. Termini is pictured with a cousin.—S.N.S. photo.

**FESTIVAL QUEEN**—Beaming beauty is Jenny Childers, selected from 50 candidates to be Festival of States queen at the coronation ball in St. Petersburg, Fla., recently. Week-long festivities were climaxed by gigantic parade with all the trimmings.—S.N.S. photo.

**ARTISTIC TALENTS**—In Simcoe County a quilt rug fair has been organized which will give much impetus to the arts and crafts which have long given expression to the artistic talents of Canada's rural communities. Above Mrs. J. K. Marshall, of Barrie, Ontario, completes a braided rug.

**HAP'S WHITE HAT FINALLY MUCH IN EVIDENCE**—During the regular season, the Toronto Maple Leafs just couldn't win three games in a row and enable Coach Hap Day to wear his famous white chapeau which he couldn't don until that feat had been accomplished. But now the Allan Cup is won it is a different story. Two of Leafs' strongest rosters are pictured here. They are Hap Day's two children, June and Perry with their dog Mickey. Perry is wearing, you guessed it, his dad's pearl-white hat, which was donated by a Leaf fan and which is supposed to be the only one of its kind in Canada.—S.N.S. photo.

**WELL LUBRICATED**—Even a lad of tender years believes in well-lubricated machinery. Shown applying the oil can to his tricycle is four-year-old Richard Harris, while two-year-old brother, Derek, watches the operation. They are the sons of Mr. and Mrs. Roy F. Harris of Ten Mile Point, Victoria, B.C.

**YOUTH CLUB CHECKS JUVENILE DELINQUENCY**—As an aftermath of P.C. Gerald "Jerry" Brennan forming a boys' athletic club at Wagon Beach, Ont., the residents of this summer resort district proudly declare that this village is free of juvenile crime. After various cottage break-ins and other minor disturbances had been committed by teen-agers, "Jerry" Brennan decided that something should be done to give the youths other interests, so he formed a boys' club. Now there are no more break-ins and the club proudly boasts of 50 members. Above, Jerry is seen displaying models he helped build with Bobby Winnick, Jack Bolle, front; Ross Brown, Ron Inch, rear.—S.N.S. photo.

**"LOVABLE OLD FILM RASCAL"**—Grizzled Wallace Berry, who recently celebrated his 54th year as the "lovable old rascal" in Hollywood's rough and tumble movies, died at his home of a heart attack. He was 65. It was the last of many seizures suffered by the lusty character actor since he strained his heart last summer cranking an outboard motor. As a young man he was a chorus boy and a railroad wiper in a round-house. As the gray-haired, hard-boiled movie actor he made more than 250 pictures and kept the nation alternately chuckling and weeping for almost four decades. Only Lionel Barrymore headed a longer Hollywood career. The actor was married twice. His first wife was Gloria Swanson. They were divorced in 1918. His second wife was Rita Gilman. They adopted Carol Ann, daughter of her cousin. Divorce ended this marriage in 1950.—S.N.S. photo.

**WORLD'S CHAMPION**—Club Leader Jack Wauchoppe shows how he milked the 1,324 pounds of butterfat in 2X a day milking from Lynden Harting Daisy in 365 days to make her a new world's champion. Behind Daisy from left to right are: M. P. Cockburn, Agricultural Representative, York County, Ont.; L. O. Goulet, G. J. Creswell, D. S. Dutton, Roy H. Barker, noted Holstein breeders and F. R. Orniston, Holstein salesman.

## Know Your Provinces

## Manitoba's Second Largest Inland Fishery In Canada

THE second largest inland fishery in Canada is situated in Manitoba. Although one of the prairie provinces, Manitoba is fortunate inasmuch as it has a surface area of 26,783 square miles of lakes and streams and hence it was possible during the fiscal year 1946-47 to have a fishery production which amounted to 28,696,600 pounds of edible fish. The production of this huge quantity of nutritious food gave employment to over 7,000 men.

The total value of the fishery crop when marketed was \$4,533,738, the greater part of which was paid to the commercial fishermen of the province. As the bulk of this production was exported to the United States, the fishing industry contributed a substantial sum of money toward the national balance of trade. In addition to those employed in the primary production of fish, many others engaged in subsidiary industries find employment in the basic fishing industry. A provincial boat building industry depends in large measure on the fishery products. Forest products in the form of fish boxes, find a ready sale to the fish dealers of the province all of which means work and wages for Manitobans derived from the parent fishing industry.

The bulk of the fishery production of the province comes from the southern portion, namely Lake Winnipeg, Lake Winnipegosis, Lake Manitoba and Lake Dauphin. Northern lakes, however, contributed 4,697,000 pounds to the total fisheries production. Fifty-four lakes are commercially fished in northern Manitoba. Two of the northern lakes, Southern Indian and God's Lakes are huge reservoirs of fish, producing between them over one and a half million pounds annually of the choicest varieties. By the use of modern trawling equipment in the winter, much as tractors and bulldozers, it is now possible to land at railroad, unfrozen fish from northern lakes, which is packed in ice, and which reaches the markets to the south in first class condition. The Manitoba fish production is composed of 14 varieties, the principal ones being whitefish, pickerel, lake trout, and lake herring. In addition to the huge commercial fishing industry, the fisheries of Manitoba provide an excellent tourist attraction. Scores of lakes and streams throughout the province provide excellent fishing with sport and recreation and perhaps a tasty reward for the fisherman. During the past year 4,984 non-resident

## Grandma's Advice

By JANE DALE

"Billy, mind your p's and q's when you play at the party. Don't be sure you're a winner. They'll say you're a snort. Don't let your stockings drag and see that your tie is straight. Say 'thank you,' nicely to your host and don't say 'bye'.

Billy, mind your p's and q's when you take the girl walking. Take along some handkerchiefs they help with the talking. Leave her house at 10 o'clock; don't for a moment linger. Don't try to kiss her; the sly; you may get a stinger!

Billy, mind your p's and q's when you go to court. Tell her often that you love her; make it sound right sporting. Keep her really interested until the wedding day.

There see she minds her p's and q's she promised to obey!

## U.S. Secretary Of Commerce To Open Trade Fair

OTTAWA—Hon. Charles Sawyer, U.S. Secretary of Commerce, has accepted the invitation of the Government of Canada to open the Trade Fair on May 30, Right Hon. C. D. Howe, Minister of Trade and Commerce, announced.

"I welcome Mr. Sawyer's acceptance as a gracious expression of the goodwill interest in the Trade Fair in both government and business circles in the United States," said Mr. Howe. "It is a significant recognition of the community of interest of our countries in all matters that have for their purpose the strengthening of our trade relations with each other and the expansion of international trade at large.

"In the preparations for this year's Trade Fair, special efforts are being made to attract a greatly increased attendance of buyers, and of business visitors generally, from the United States. Our Exhibition Commission, in placing particular emphasis on that objective, has had the benefit of generous and helpful co-operation from the Department of Commerce, at Washington, and from its field offices throughout the United States."

Mr. Howe pointed out that prospects for the 1946 Trade Fair are most encouraging. Manufacturers from 32 nations will display their products this year compared with 27 in 1945.

Mr. Sawyer was United States Ambassador to Belgium and Minister to Luxembourg before becoming Secretary of Commerce. In accepting the invitation, he said, "I welcome the opportunity to take part in the ceremonies opening the Second Canadian International Trade Fair. The display of goods from many parts of the world will undoubtedly attract Canadian and business men from the United States. The Fair will make possible on-the-spot inspection of potential lines of import, as well as provide a means of direct contact with their producers. It is in my hope and belief that businessmen from many other countries, as well as the United States, will come to the Fair."

## NEW CURE

LONDON.—A new 24-hour influenza cure has been successfully tried out in hospitals through the country. The cure—1,000,000 units of penicillin every four hours—puts patients on their feet five days earlier than usual.

## NEAREST TO EUROPE

Pernambuco, or Recife, capital of the state of Pernambuco, Brazil, is the nearest to Europe of the important ports of Brazil. It is on the direct route of the trade to southern South America, and is a port of call for many steamship lines from Europe.

## WORLD HAPPENINGS

BRIEFLY TOLD

George Yeh laid claim to being the world's lowest paid deputy foreign minister. His salary in March amounted to \$2.

Three United Kingdom airlines in co-operation with 14 international airlines have prepared a standard tariff for around the world flights.

The U.S. senate amended the foreign aid authorization bill to ban U.S. relief shipments to Communist-controlled areas of China.

David H. Clegg, CBE of Toronto, was elected Dominion President of the Navy League of Canada for the 12th consecutive time at the close of the 31st annual meeting.

The British Parliament has been asked to see that the licensing of pets is replaced by the licensing of pet owners—after owners have passed examination.

Oliver Nicholas, who operates her own shoe store in Vancouver, started in the trade 17 years ago as her father's helper. Later she worked in shoe shops and factories.

The superintendent Imperial Alberta, Canada's largest oil tanker, was launched at Chester, Pa. after being christened by Mrs. Manning, wife of the premier of Alberta.

D.P. Domestic Popular At Domain, Man.

WINNIPEG.—Farm domestics from the D.P. camps of Europe have become so popular around Domain, Man. that they are really in demand. It was learned at the Canadian National railways station here recently.

Out of nine D.P. girls arriving for Manitoba points, three were destined for Domain. An additional dozen were continuing westward to other prairie points.

Waiting at the station to meet one of these girls were Mr. and Mrs. J. Sim, who live on a farm three miles west of Domain. "We had a Lithuanian girl working for us, but she was married last fall to a fellow D.P. living in Kitchener, Ont.," said Mr. Sim. "My wife is still corresponding with her, and she says she is going to visit us this summer," he added.

## Foundation Layout

The above diagram shows the method of measuring to square up foundations and also the placing of batter boards to carry the measuring and guiding lines, which are laid in saw cuts.

BUILDING a house always starts with the laying out of the foundation, which presents more of a problem than appears on the surface. Once the general location of a building has been established, the first step in laying out the foundation is to establish one side of the building. Usually this side will be parallel with some other building, or perhaps a roadway. Once the location of this line has been determined, it is to be established at right angles to the line AB in the accompanying drawing.

Next, the width of the building is measured off from one of the corners established, and it is here that the 3-4-5 rule is applied. This rule is convenient whenever one line is to be established at right angles to one already in existence. It works as follows: One corner of a building is established, as for instance, the point A in the accompanying drawing. A distance which is a multiple of three is measured along the line to be established, and a pin or other mark is placed at the end of the line, as, in the drawing, at point B. A distance which is a multiple of four is then laid off along the line AB in the drawing. The line BD must be drawn at right angles to each other. The length of diagonal between the two points measured or the two lines laid off will be exactly five, or a corresponding multiple of five.

If buildings of considerable size are to be laid out by this method, it is usual to measure 30 feet along one line from the corner, 40 feet along the other line from the corner when the diagonal between these two points must measure 50 feet. If the angle between the two lines is to be a right angle, if the diagonal is more than 50 feet, the line BD must be swung until the diagonal measures exactly 50 feet. Any distances which are multiples of three, four and five may be used in this rule, and the longer the distances the more accurate the work.

Once two sides of the foundation line have been established, it is an easy matter to lay out the remaining

SELECTIONS

RECIPES

CHEESE CAKE

Crust:

1 cup butter

1 cup sugar

1 egg

1 cup sweet milk

1 cup flour

1 teaspoon soda

1 teaspoon flavoring

Cream butter, add sugar gradually and cream well together. Add vanilla and beat thoroughly. Add milk and when well mixed, fold in flour which has been sifted with soda. Add flavoring. Roll out to 1/4-inch thickness and line cake pan or layer tin.

Filling:

1 cup cottage cheese

1/2 cup sugar

3 tablespoons cream

Grated rind of lemon

3 eggs

1 egg yolk

Mix together cottage cheese, sugar, cream and grated rind of lemon. Then add well beaten eggs. Place over unheated crust. Bake at 350 deg. F. about 40 minutes.

## Saskatchewan Irrigation Plan Advances

REGINA.—An intensive engineering survey of the South Saskatchewan irrigation and power project will begin shortly. L. D. Thomson, director of the Prairie Farm Rehabilitation Association, announced plans for the survey following a two-day meeting of PFRA engineers, Agriculture Department economists and university associates.

The \$2,000,000 survey calls for a complete program of economic study involving land classification based on last year's soil survey, Mr. Thomson said. Farm business will be studied closely to determine changes that may be necessary in the short term; dry land to irrigation farming.

Study also will be made of recreational possibilities of the 335-mile reservoir which would be formed by completion of the proposed dam at Elbow on the South Saskatchewan river.

"This is an action program to get an over-all picture of what the project will do to the area involved," Mr. Thomson said.

The survey will be headed by Ralph Stull, Saskatchewan, associated with the Economics Branch of the Federal Agriculture Department.

Cost of the dam to irrigate 600,000 acres has been estimated at \$66,000,000 and may take another 30 years to complete. The reservoir created by the dam will cover 95,000 acres.

Two inches is the average thickness of the bit of a bioplastic material before and during the war on the extraction of oil and blumen from the sands. During the war the company was partially financed by the federal government.

Tests halted when fire destroyed the company's test plant.

President Truman signed into law a 19-month, \$5,000,000 renewal of the Marshall plan.

### DDT NOT HARMFUL TO HONEYBEES

Are sprays containing DDT for control of insect pests in fruit, seed and vegetable growing areas. In-  
jurious to honeybees? Beekeepers  
in these areas sometimes ask this  
question.

According to officials at the Cen-  
tral Experimental Farm, Ottawa,  
the answer is—no. And the officials  
have experimented constantly since  
DDT became more generally used  
as an insecticide some few years  
ago.

They have used highly concen-  
trated quantities of the chemical to  
spray fully open apple blossoms  
while the bees were at work. The  
force of the spray material even  
drove the bees away temporarily,  
but they returned before it was dry  
and started collecting nectar again.

The dead bees which had worked  
the sprayed blossoms were subject-  
ed to chemical analysis for the  
presence of DDT. In only one ex-  
ample was DDT found in sufficient  
quantity to be even suspected as  
the cause of death. And at no time  
was the death rate of adult bees  
of brood, any higher than that  
which occurred in a check apiary.

The result of this quite drastic

### URANIUM SEARCH TO BE INTENSIFIED

Efforts to find additional Cana-  
dian reserves of uranium, raw ma-  
terial of atomic bomb manufacture,  
will be intensified this summer in  
northern Saskatchewan where at  
least two companies plan to under-  
take extensive underground devel-  
opment of uranium properties.

The larger program will be car-  
ried out by Eldorado Mining and  
Refining Limited, the crown-con-  
trolled company which operates at  
Great Bear Lake one of the two  
largest sources of uranium in the  
world. (The other source is the  
Belgian Congo.)

Nicholson Mines Ltd. of Toronto  
will also operate in Saskatchewan.  
The Northern Saskatchewan ura-  
nium ore bodies have been under  
exploration for five years near the  
east end of Lake Athabasca.

Baseball is popular in Holland.

Experiment—normally apple trees  
are not sprayed during the period  
of open bloom—proves beyond  
doubt, officials say, that under nor-  
mal field conditions, DDT is not  
harmful to honey bees.

### LITTLE ITEMS OF LOCAL INTEREST

Mr. Heath Gordon spent the past  
ten days visiting with his parents,  
Mr. and Mrs. Fred Gordon.

Miss Violet Pattison was a Cal-  
gary visitor last week.

Mr. and Mrs. L. Foxon were Cal-  
gary visitors this week.

Jimmy Cooper had the misfor-  
tune to fall from his bicycle and  
dislocate his shoulder.

Jack Gordon was a patient in the  
Calgary General Hospital, where he  
underwent an appendix operation.

Miss Marion Torrance is visiting  
at the home of her parents, Mr.  
and Mrs. S.F. Terrance.

Mr. W.E. Lambert was a Carbon  
visitor over the week end.

Miss Martha McCall of Montreal,  
Alberta, visited at the home of Mr.  
and Mrs. Fred Gordon last week.

The British Minister of Agriculture  
has announced that the British  
price for Irish fat cattle is to be in-  
creased by 4-6 per cwt. (eight cents  
a pound). This is a result of the in-  
creased price obtained by the Brit-  
ish Farmers' Union, since the Ang-  
lo-Irish Trade Agreement of August  
1948, provides that prices paid for  
British and Irish fat cattle must re-  
main in line. There is a British  
subsidy of 5-0 per cwt. (nine cents  
a pound), payable on cattle reared  
and fattened in Britain.

FOR SALE—McClary Royal Excort  
coal and wood stove, in good con-  
dition. Apply to "Dusty" Foxon.

#### CARD OF THANKS

I wish to thank the Carbon Old-  
timers for the lovely flowers sent  
me while a patient in hospital.

HAROLD BRAMLEY

### Says Bob Edwards:

In the issue of the High River  
Eye Opener on July 25, 1903, Bob  
Edwards is just getting settled in  
local journalism. He casts a blithe  
eye over the doings of the North  
West Territories with great hopes  
for the north country. A few jottings  
from the Minnapee Gazette are in-  
cluded in his social items, clipped  
from the best thoughts of the ed-  
itor, Peter McConigle.

(High River Eye Opener, July 25,  
1903) High River Times.

The Eye Opener is flying along  
over the crest of the waves with  
balloon topsail and spinnakers all  
set. Let 'em all come. We're ready.

#### That Railroad

We understand that when the  
Grand Trunk reaches the Peace  
River country, a branch line will be  
run to the Arctic Circle paralleling  
the McKenzie River. This will give  
a fairly straight shoot from the Ar-  
ctic Ocean to Edmonton. The main  
object will be to ship walrus from  
the north to Edmonton, where they  
have no walrus, and haul back hay  
and oats to the Eskimos, many of  
whom run large herds of walrus.  
The walrus will be watered on the  
way down at Great Slave Lake,  
which will be liberally stocked with  
herring and other fishes for feeding  
purposes. What between walrus at  
Edmonton, sharks at Calgary, lob-

sters at Okotoks and suckers every  
place else, Alberta bids fair to be-  
come an aquarium of curious marine  
specimens. The walrus will be  
used by the real estate men of Ed-  
monton to help them spout.

#### From Minnapee Gazette

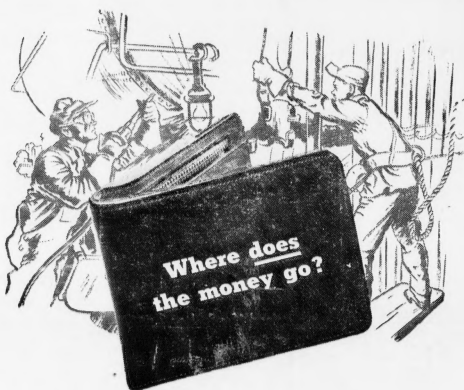

Peter McConigle's news of the  
past week includes the following  
portentous items:

We understand that Mr. Shaw is  
seriously thinking about painting his  
front fence a beautiful yellow.  
Minnapee is the home of art.

In his sermon, Sunday evening  
Rev. Johnson referred to the tremen-  
dous strain put upon editors to  
keep up with the times. How true!  
There is hardly a night that we do  
not go home with our head in a  
whirl and our minds in a state of  
chaos. Yet how few people think of  
this when they pick up a copy of  
our paper.

The bar receipts at the new  
hotel are running a good average,  
a great sign of prosperity. A move-  
ment is afoot for the distribution of  
a pamphlet in the east, setting  
forth the bar receipts of this excel-  
lent hotel, and the wonderful  
scale effects resulting. It should  
create a profound impression on in-  
coming settlers.

It seems a pity that our territo-  
rial and Dominion assemblies should  
have so many lawyers, doctors and  
editors. A fair sprinkling is enough.  
We don't need a cloudburst.

Just before payday you've probably looked  
at what's left of your wages or housekeep-  
ing money and said: "Where does the money  
go?" A company must ask itself  
the same question, and each year pro-  
vides the answer in its annual report.

The dollars we received last year—for  
gasoline, kerosene, fuel oil and other  
products—went this way:

**Crude Oil** and other raw materials we  
needed to make the products took the first  
slice. Depending on where you live your  
oil may have come from Arabia,  
from South America, or from deep in the  
United States. In Canada only Alberta  
produced crude in quantity.

**Manufacturing** and packaging came  
next—complex and intricate refining  
operations are needed to make the hundreds  
of oil products which find thousands of  
uses in our homes and industries, on our  
highways, in the air and on the sea.

**Transportation** was the next big bite—  
products must move over wide areas to  
serve all communities in Canada.

**Marketing** was fourth. Marketing pro-  
vides the products you need wherever you  
are—power, heat and lubricants for  
factory, farm and home. Marketing sup-  
plies that local businessman, the dealer,  
and if you're a fuel oil user, keeps oil  
in your tank!

**Taxes** to provincial and federal govern-  
ments absorbed 7.06 cents. And this does  
not include gasoline tax, which—depend-  
ing on where you live—takes from 22 to  
35 cents out of every dollar you spend for  
standard grade gasoline.

**Profit** was 4.9 cents out of each sales  
dollar. From this we paid three cents to  
shareholders as dividends. The rest was used  
—together with a lot more money we bor-  
rowed and still more obtained by sales of  
investments—to help meet your increasing  
needs for oil.

IMPERIAL OIL LIMITED

## Royal Hotel

Calgary Alberta

Located in the Centre of Everything  
Worthwhile in Calgary  
LADIES' LOUNGE ROOM

Private...

7,551,058\* bank accounts

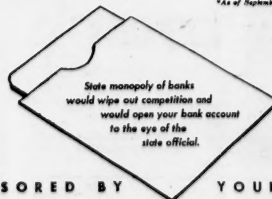

You TAKE for granted that your bank keeps your  
account private... even though yours is one of more  
than seven million deposit accounts in Canada's  
3,385 branch banks.

When you put money in, take it out, arrange a loan—  
transact any of your banking business—nobody need  
know about it but you and your bank.

It's the most confidential business relationship  
you have.

Canada's ten chartered banks compete to serve you,  
in handling your cheques, lending money, safeguarding  
your funds—and in many other ways. You know  
you can always expect privacy and efficiency.
